

NEW AIPHONE 'WAVE' Touch Free Entrance Stations

COVID-secure

Protecting customers, staff, family, friends and public health. Aiphone UK has developed a NEW range of Anti-virus Door Stations.

Motion Detection

These worry free panels use a sensor to detect the visitors hands at 10cm distance. This allows for touch free calling and also prevents any motion from triggering a call beyond that range in order to avoid false activation.

Suitability

Ideal for high traffic buildings, such as Schools, Nursery, University, Hospitals, Health Care, Care Homes, Office Buildings, Shops, Industrial Buildings, Delivery Access and more.

Available Solutions

Touch Free Module is available for core Aiphone products, GT, IX, JO and JP series. If you currently have a 1 button GT Entrance station, with an additional power supply you may be able to simply replace the existing call button module with our COVID-secure, Touch Free sensor module.
