AIPHONE®
Providing Peace of Mind

NEW AIPHONE 'WAVE'
Touch Free Entrance Stations
COVID-Secure

wave

Touch-Free Calling for a Safe and Secure environment. WAVE call stations provide touch-less calling and clear audio/video communication to identify visitors quickly while limiting exposure to common surfaces.

Motion Detection
This worry free panels uses a sensor to detect the visitors hands at 10cm distance. This prevents any motions triggering the call beyond the range for unnecessary attention.
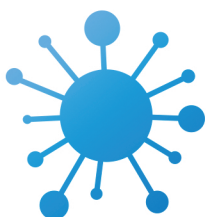

Suitability
Ideal for high traffic buildings such as Schools, Nursery, University, Hospitals, Health Care, Care Homes, Office Buildings, Shops, Industrial Buildings, Delivery Accesses and more.

Available Solutions
Touch Free Module can be connected to a wide range of our products from Audio only to Full featured IP Video Entry Systems. Including panel mount reader cutout and universal prox cutout options. This flexibility allows us to meet each applications unique requirements.

If you currently have a 1 button GT Entrance station, with an additional power supply you may be able to simply replace the existing call button module with our COVID-secure, Touch Free sensor module.
